Amanda,

First off - Thank you for the compliment :-)

I would definitely like to move forward as quickly as possible with everything. I will finish up the additional page or two that will include a 'typical' system layout and have it back to you by Monday morning as a v2 of the pdf I sent (I also noticed a copy/paste mistake on the travel deck page where I'm describing the vibration motors which I've since corrected)

I guess my only question for you at this point is how long do you figure it will take until it's 'official' and I can share my idea with others?

Also - here is the real-world camera tracking stage and setup I based my model on in the drawings. Figure it may not hurt to have a reference to checkout.

<https://xitelabs.com/virtual-production/>

This is where I working in LA from 2014-2020 and also where I would most likely go to film the first prototype of my invention.

Thanks for being on top of this,  
I've never gotten anything patented before and this is the most fun and excitement I've had since the covid bs started.

~Matt
