

ROBOTIC ARM

For realistic 3D presentation

Welcome to a 3D world

Add the third dimension to objects and present them from all angles, both as a whole and as a detailed view. Robust construction, precise movement and two arm sizes allow you to capture objects of all sizes. Thanks to the fine, precise movement of the camera, you can create highly realistic 3D images.

always the right angle

Using compatible devices such as the Centreless Tablea the arm and the photographed object to be moved at the same time, creating a realistic 3D display of the product.

robotic arm

Precise

The Arm does not oscillate, the camera moves along a precise trajectory.

Large Range

The large mounting range provides variability in your choice of tripod heads and cameras

Easy Transport

Retractable wheels for easy transport of the robotic Arm between stations within the studio

Quick Setup

A docking station allows for quick set-up of the robotic Arm on compatible devices.

Forget looking for a compromise between quality and efficiency. Achieve perfect results with small, large, transparent or glossy plates. This allows you to capture images of anything, from a ring to a suitcase.
