

Studio Workflow

Track items from receiving to image capture, publishing, content distribution, and product-out.

THE FLOW

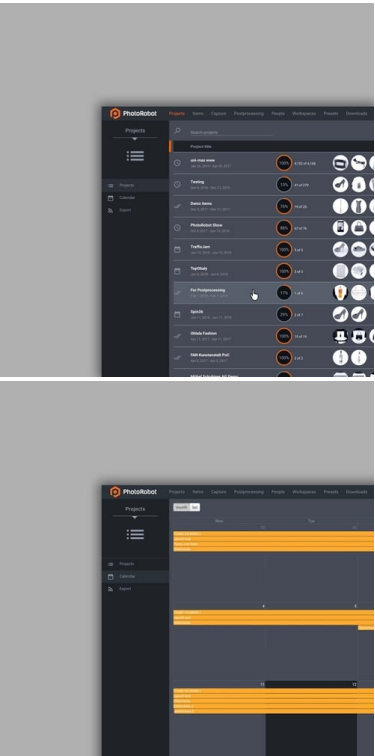

Dashboard

Get an overview of any project at any time, with overall progress of photoshoots tracked every second in real-time.

Projects

Organize all projects in a well-arranged list, with progress overview, last modified / captured, and quick links to project managers & clients. Update project statuses: Reserved, Confirmed, In Progress, Complete, and Invoiced.

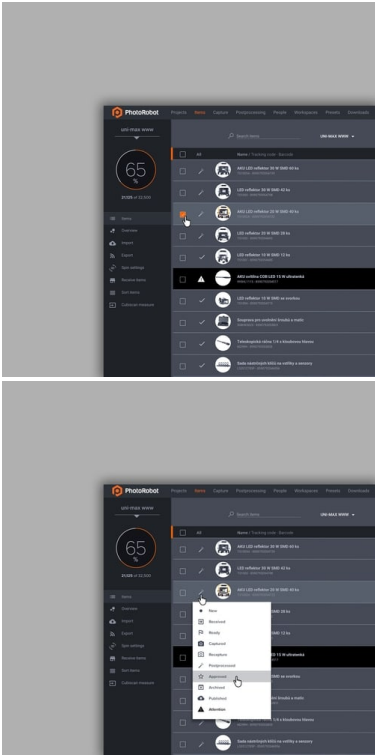

Calendar View

Use the built-in calendar view to get a more complete overview of ongoing projects and deadlines.

Items

Monitor workloads inside each project via individual Items and Item statuses for each photoshoot.

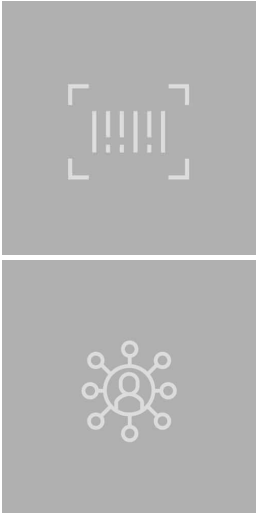

Wide Range of Item Statuses

Attach statuses to items, including: New, Received, Ready, Captured, Recapture, Edit, Approved, Published, Archived, and Attention.

Barcode Reader Support

Get barcode reader support in every part of the application. Simply scan products to mark “Received”, search in item list, load Preset sequences, or prepare for capture.

Approval Process

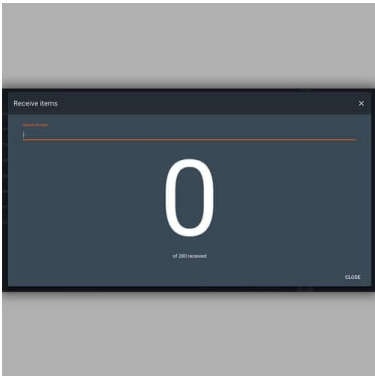

Reduce product content review times with integrated approval processes for internal managers or direct client access. Grant access to clients for single-click approval.

Import Shooting Lists

Create shooting lists with CSV file import, including support for various properties available. In addition, users can customize the structure by marking columns as tags.

SPECIAL Item MODES

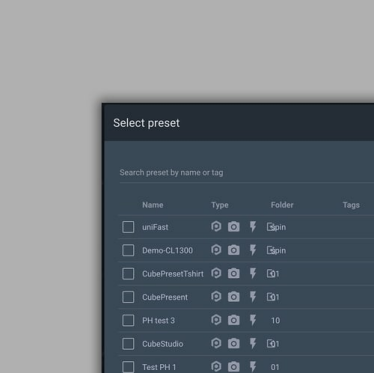

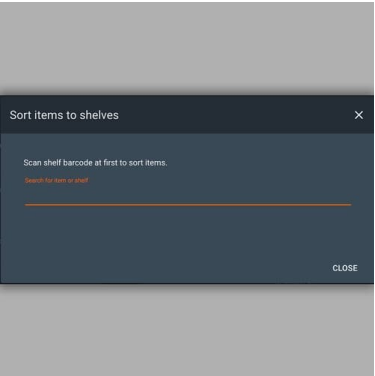

Receiving Items

Deploy item tracking features at the scan of a barcode to automatically update item statuses and generate timestamps. Support for auto-printing of internal codes or unique barcodes is also available.

Sorting to Racks or Shelves

Add rack or shelf codes to the system to sort items into categories with configurable photoshoot settings. Simply add a rack or shelf code and deploy a barcode reader to organize your products and shooting lists.

Presets

Configure Presets before photoshoots to streamline production times. Set photography sequences in just a few clicks of the mouse, and press Play in Capture mode to begin photoshoots.
