## D Model hyper-parameters

Table 27: Hyper-parameters for pre-training 2B, 8B and 137B models. All models were trained with 256K tokens per batch.

Parameters	Layers	Units	Heads	pre-train steps	pre-train chips	pre-train time (days)	fine-tune chips	fine-tune time (hours)
2B	10	2560	40	501k	64	1.5	16	3
8B	16	4096	64	521k	64	23	16	6
137B	64	8192	128	3M	1024	57.7	64	36

## E Pre-training data composition

The pre-training data, called **Infiniset**, is a combination of dialog data from public dialog data and other public web documents. It consists of 2.97B documents and 1.12B dialogs with 13.39B utterances. The composition of the data is as follows: 50% dialogs data from public forums; 12.5% C4 data [ 11 ]; 12.5% code documents from sites related to programming like Q&A sites, tutorials, etc; 12.5% Wikipedia (English); 6.25% English web documents; and 6.25% Non-English web documents. The total number of words in the dataset is 1.56T. Note that this composition was chosen to achieve a more robust performance on dialog tasks (Section 4) while still keeping its ability to perform other tasks like code generation. As future work, we can study how the choice of this composition may affect the quality of some of the other NLP tasks performed by the model.
