

National Defense & Investment Opportunities Report:

US Patent 11,577,177 ("Infinite Movement" Treadmill)

Based on Declaration of Hao Li (Case No. 3:17-cv-04006-JST)

1. Key Document Reference

- **Declaration of Hao Li:**
<https://storage.courtlistener.com/recap/gov.uscourts.cand.314347/gov.uscourts.cand.314347.139.7.pdf>
 - **Relevance:**
Highlights direct ties between the patent's core technology (virtual movement systems) and defense-funded research in human digitization, simulation, and immersive training.
-

2. Defense Entity Alignment

- **U.S. Army & Army Research Office (ARO)**
 - **Existing Investments:**
\$2.8M for "*Avatar Digitization & Immersive Communication Using Deep Learning*" (ARO, 2017–2019).
\$1.4M for "*Capture, Rendering, & Display for Virtual Humans*" (ARO, 2016–2017).
 - **Interest in Patent:**
The treadmill's ability to simulate unrestricted movement in confined spaces aligns with ARO's focus on **immersive soldier training**. The system could enable soldiers to "walk" through virtual combat zones, urban terrains, or disaster scenarios while physically stationary—critical for mission rehearsals in controlled environments.
- **Office of Naval Research (ONR)**
 - **Existing Investments:**
\$591K for "*Complete Human Digitization and Unconstrained Performance Capture*" (ONR Young Investigator Award, 2018–2021).
 - **Interest in Patent:**
ONR's funding of unconstrained human digitization directly overlaps with the treadmill's capability to map real-world user motion to virtual avatars. Applications include naval VR training (e.g., shipboard firefighting simulations) and telepresence for remote operations.

- **DARPA & Intelligence Advanced Research Projects Activity (IARPA)**

- **Existing Investments:**

- \$419K for “*GLAIVE: Graphics and Learning Aided Vision Engine for Janus*” (IARPA/DoD, 2014–2018).

- **Interest in Patent:**

- DARPA’s history of funding AI-driven virtual environments (e.g., *Squad X* program) suggests strong potential for integrating the treadmill into AI-generated “infinite” training worlds. The patent’s real-time camera-treadmill syncing could enhance autonomous drone pilot training or mixed-reality battlefield simulations.

- **USC Institute for Creative Technologies (ICT)**

- **Existing Partnerships:**

- Hao Li directs ICT’s Vision and Graphics Lab, which has received \$8.89M in federal grants (2015–2019) for projects like “*Light Stage Pipeline for High-Fidelity Face Digitization*” (ARO-funded).

- **Interest in Patent:**

- ICT’s work on soldier avatars and VR trauma training (e.g., *STRIVE* project) could leverage the treadmill to create hyper-realistic, physically interactive scenarios. The treadmill’s compatibility with LED/green screens (as cited in the patent) matches ICT’s existing virtual production infrastructure.

3. Investment Opportunities

- **Military Training Contracts**

- **Target:**

- U.S. Army’s Synthetic Training Environment (STE) program, a \$10B initiative to modernize VR/AR soldier training.

- **Use Case:**

- Replace traditional treadmills in STE’s One World Terrain system, enabling soldiers to traverse AI-generated global landscapes.

- **Defense Contractor Partnerships**

- **Example:**

- Lockheed Martin or Northrop Grumman, which develop VR training modules for F-35 pilots and ground troops.

- **Patent Value:**

- Treadmill's real-time haptic feedback (vibration cues for positional awareness) could enhance situational realism in simulations.

- **Dual-Use Commercialization**

- **Path:**

- License the patent to defense-focused startups (e.g., Anduril Industries) for border security simulations or drone operator training.

4. Strategic Recommendations

- **Leverage USC ICT's Defense Network:**

- Use Hao Li's existing ARO/ONR grants (declared in the court document) to pilot the treadmill in ongoing projects like "*Digital SHARP Survivor*" (ARO-funded trauma training).

- **Pursue SBIR/STTR Funding:**

- Target DARPA's Small Business Innovation Research program for AI-integrated locomotion systems.

- **Collaborate with Simulation Tech Firms:**

- Partner with CAE or Bohemia Interactive Simulations (military VR providers) to embed the treadmill into their platforms.

5. Conclusion

- The Declaration of Hao Li underscores ***direct alignment between US Patent 11,577,177 and defense priorities in immersive training, human digitization, and AI-driven virtual environments.***
 - With documented funding from ARO, ONR, and DARPA for related technologies, InfiniSet's treadmill is positioned to attract strategic partnerships and contracts within the national defense sector.
-

6. Next Step

- Initiate outreach to USC ICT's military liaisons and submit proposals to DoD's Simulation and Training Technology Center (STTC).
-
