

Distributed backups are better.

Storj distributes data in a unique way that reduces storage costs up to 90% with superior durability, security and unmatched performance.

Beyond enterprise-grade.

Fast recovery

Improve RTO and RPO - backup from anywhere and restore to anywhere with superior performance globally.

Secure by default

Reduces the risk of disasters, outages and threats like ransomware by distributing data over a massive network.

Immutability

Object lock prevents files from being modified or accidentally deleted, protecting data from ransomware and other malicious activity.

More sustainable

Slashes carbon emissions by leveraging unused hard drive space and reducing the need to replicate data.

Backup pricing

\$5.00 Per TB/month

- ✓ No minimum storage retention
- ✓ No capacity minimums
- ✓ No fees for egress or API requests
- ✓ Globally distributed

"Storj has an impressive high performance, globally distributed and globally available object storage platform that my customers can leverage to protect their most important data."

Corey Kirschner

Senior System Engineer, Veeam Software

A game changer for cloud storage.

Storj transforms unused storage space around the world into a massive, globally distributed network, eliminating the need for costly data centers while providing enterprise-grade durability and superior performance regardless of location. With low costs and no need to pay extra for data replication, businesses save up to 90% on cloud storage costs and significantly reduce their carbon intensity.

Store your data on the better cloud.
