Next Animation Studio owns and operates the only Light Stage capture facility in Asia. The Light Stage is a cutting-edge scanning technology that can digitally capture a human face with unprecedented realistic accuracy within 9 seconds. The digitally captured model can then be placed under a variety of different environments and reflect accurately the color, texture, shine, shading, and translucency of the skin texture. The results are far superior than any other facial scanning technology in the market today.

The Light Stage technology has been used in a number of Hollywood blockbusters such as The Curious Case of Benjamin Button, Lord of the Rings, Avatar and many more.

Next Animation Studio (NAS) is the fastest, full service animation studio in Asia, specializing in high-quality animation from concept to completion. The studio focuses on developing and producing fast animated news, high-quality original animation for delivery across multiple media channels, and innovative AR and VR content. NAS employs hundreds of creators and animators in Taipei, Taiwan, and has offices in Hong Kong, Japan, and the United States.

With millions of followers and billions of views, NAS is known around the world for its daily news animation published under its TomoNews platform. NAS handles every step of the 3D animation content workflow: from storyboards to development of 3D models to CG animation. NextLab, the R&D operations at NAS, develops new technologies that push the boundaries of immersive entertainment and animation production.

Funny Cat Videos Motive

Here at [Funny Cat Videos](#), we take funny cat videos seriously, so when it came time for us to determine what videos would do a lazy day justice, we had some pretty stringent parameters. Our picks needed to have insanely good replay value. They needed to have relatable characters and stories easy enough to invest in that even someone hunkered-down with the flu could still enjoy what s going on. And lastly, longer cat movies, Cute Cats, Funny cats, Funniest Cats Compilation and funny animal videos took priority in our research, for obvious reasons (read: time consumption).
